

## Energy & Utilities

# Strength of experience in energy production and project development

**Nelson Mullins' attorneys know the energy industry and the challenges you face in this highly regulated environment. We can help your organization whether you are**

- an alternative energy developer seeking to develop, finance, or sell individual or a portfolio of projects
- a lender or equity provider providing development capital, construction financing, tax equity, or permanent financing
- a refinery or pipeline company negotiating a new oil-and-gas project
- a utility appearing before utilities commissions to address regulatory disputes
- a technology company navigating today's multifaceted energy industry

**Representing private and public energy industry clients on a range of financing, compliance, transactional, regulatory and tax issues**

Working with alternative and traditional energy companies, as well as public utilities, Nelson Mullins provides representation in energy-related transactions, regulatory matters, and on policy issues affecting energy. We provide legal counsel to help clients from the early stages of a project—including tax structuring and development—through to financing, construction, and operation. Complementary teams from our government affairs, real estate, and transactional practices address land use, rate setting, environmental compliance, leases, joint ventures, and other issues. Most of all, our seasoned professionals serve as trusted advisors through the ever-shifting landscape of the modern energy industry.

---

### Generating power through sound counsel

- Compliance issues associated with regulatory changes
- Acquisition and disposal of power projects, including large portfolios
- Alternative energy projects, including solar and waste-to-energy
